## 4. Findings

Serial LT8891 matches the order line for O112. No physical damage; the chassis and display are intact; charger present.

Fault reproduced: the laptop powers on, then shuts down without warning within 2-10 minutes under light load. Memory test passes. Thermal readings are normal. The mainboard power-management log shows repeated unexpected power-loss events, which suggests a mainboard power-rail fault.

Condition: defective; defect verified: Yes.

## 5. Recommended next step

Verified failure within the 24-month warranty period. Open a warranty_review and route to TechNova authorised service for mainboard replacement, or refund with the approvals required for INR 68,999.00 (supervisor and finance controller).

Result codes (SOP WH-INS-07): PASS = inspection protocol completed and claim-relevant findings are conclusive; FAIL = findings do not support the claim as stated; INCONCLUSIVE = findings cannot be confirmed without further verification. Product condition codes follow the warehouse grading scale (new, like_new, open_box, damaged, defective, unsafe, for_parts).
