4. Findings

The item was received in its retail packaging. The packaging had been opened and the contents show only light handling. Photographs of the item and packaging are attached to the inspection record.

Serial mismatch: the order line records purchased serial SN002048, but the unit received carries serial SN7002048. The two serial numbers do not match, so additional verification is required before the identity of the returned unit can be confirmed.

All accessories listed for the product were present.

Assessment: no defect was verified (defect verified: No). The findings neither confirm nor contradict the reason recorded on the return (not_functioning).

5. Inspector system note (verbatim from inspection record)

"Returned unit serial SN7002048 does not match purchase record SN002048. Additional verification required."

6. Recommended next step

Additional verification required. Hold the return and do not request a refund while the serial mismatch is unresolved. Check the dispatch scan for order O00596 and whether serial SN7002048 appears on another order line. The request was raised 2 days after delivery, within the 30-day return window for electronics.

Result codes (SOP WH-INS-07): PASS = inspection protocol completed and claim-relevant findings are conclusive; FAIL = findings do not support the claim as stated; INCONCLUSIVE = findings cannot be confirmed without further verification. Product condition codes follow the warehouse grading scale (new, like_new, open_box, damaged, defective, unsafe, for_parts).
